

# The Value of Superior Hybrid

## Cardboard IBC's

vs.

## Superior Hybrid

Difficult to assemble

Easy to handle and assemble. ✓

Cannot be cleaned: contamination risks.  
Not always accepted in food environments.

Contamination free, cleaned at the highest  
food safety standards. ✓

Requires strapping, slip sheet and corner  
boards.

No extra packaging needed. ✓

High risk for condensation between the  
liner and the IBC, causing cardboard to get  
wet and lose its shape.

Low residue and advanced technology  
available for viscous liquids. ✓

Less ergonomic design resulting in up to  
200lbs of food waste.

Compatibility with air assist liners to **reduce  
food waste by 67%** on average. ✓

No drop-door, resulting in difficulties to  
enter tote interior.

Drop-door available for easy access. ✓

Cardboard is easily damaged, hard to  
break down and is rarely recycled.

Durable and **100% recyclable**. ✓

Stacks 2 high before box failures typically begin  
Requires a pallet.
